PERGOFLEX LITE

It is an anodized aluminum structure perfect for outdoor use. It is made of acrylic or vinyl fabric, which creates folds that act as a water channel in rainy conditions. One of its advantages is its lightweight structure, which makes it very easy to install in different types of applications. The fabric is secured to a system of crossbars with specially designed trolleys, which move on guide systems within the external profiles, allowing horizontal movement using a manual system of pulleys and ropes. It withstands strong winds of up to 50 km/h.

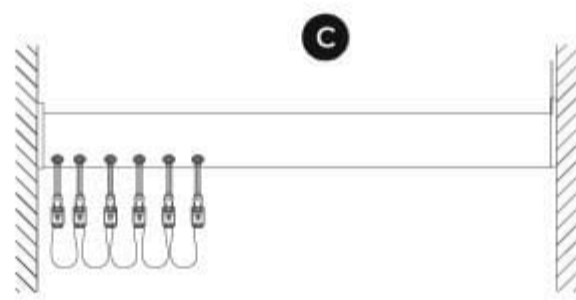

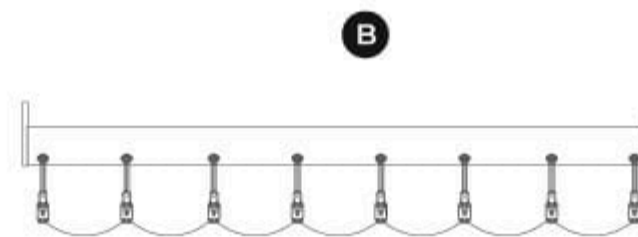

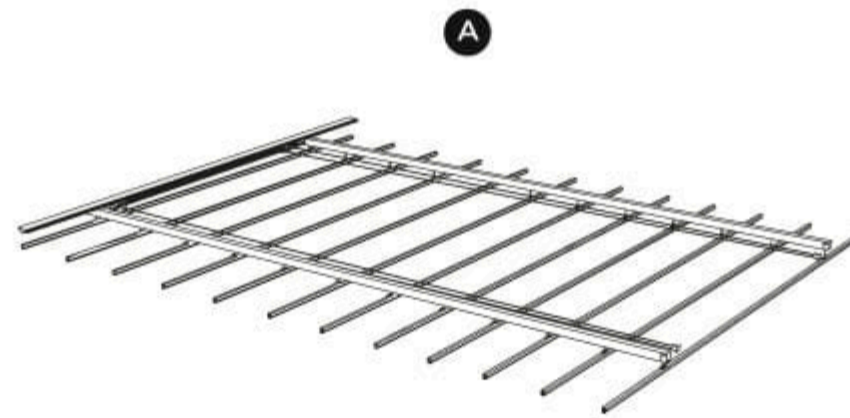

Corrugated tarpaulin (side drainage through slope of sticks)
