FLEXIGLASS

This is an innovative glass enclosure system without side profiles, with panels that slide on high-density polymer rails, allowing them to be stacked at one end of the system. It has no bearings; it operates by sliding. Therefore, maintenance is practically nonexistent, as its components wear down almost completely with daily use.

- 1) Top rail with dust flap.
- 2) Key lock.
- 3) 10 mm tempered and/or laminated safety glass.
- 4) Bottom rail.
